

GLYCOL RECYCLING EQUIPMENT & SERVICES

HAZ-MAT's Flash Fractional Vacuum Distillation systems are specifically designed to separate and purify glycol(s) from spent antifreeze and industrial waste streams, in accordance to ASTM specifications. Recovered glycol can be remarketed in concentrate form or blended as "ready to use" products. Single and double vessel systems can be used in various combinations to meet throughput requirements. Each system is pre-assembled and skid mounted for ease of shipment and field installation by our experienced technicians. Our proprietary software automates operation, allows operator control via input screen and provides remote monitoring for training or trouble shooting.

For more information contact Bill Dempsey at [402-297-2643](tel:402-297-2643) or email bill@hazmatnc.com.
